

Introducing Splunkable's Newest Instructor

Today Splunkable is welcoming its newest addition to the company, Ms. Hailie Shaw

Atlanta, GA – July 19th, 2022 – They are honored and excited for her to join the Splunkable Team! Members will benefit greatly from gaining access to her **premium training videos**, which will be available to their premium members. Hailie's course videos were launched earlier this month and her **instructor-led training** courses will be offered monthly to Splunkable's premium members starting in August 2022.

Hailie has a real passion for teaching others, so she started her journey by posting Splunk training content on her YouTube channel. She wants to teach others how to use SPL and leverage the greatest SIEM on the market to their advantage. Hailie comes from a Navy background and has been using Splunk in a variety of Security Operation Centers in her home lab environment for the past 5 years. Some of her favorite skills to leverage in Splunk include regular expressions, field extractions, and data manipulation techniques. On the weekends you can find her in her home studio where she continues to practice her cybersecurity skillsets. When not using Splunk, she is leveraging various Digital Forensics and Incident Response tools to analyze and collect digital artifacts from devices.

Hailie is a valuable resource to the Splunkable community and Splunkable is pleased to welcome her. Splunkable's founder Michael Bentley shares Hailie's same philosophies about enriching others' lives through getting them involved, trained, and working in big data. So naturally, he believed Hailie was a perfect fit. Splunkable is committed to its mission and desire to turn Splunk beginners into pros.

They have many talented individuals working in conjunction to bring the best training, recruiting, and contractor services to their members and the market at large. This is an exciting time for Splunkable as they have also just launched the **Splunkable Talent Engine™**. If you are

interested in the new content and features or in becoming part of the Splunkable community, you can learn more at [Splunkable.com](https://splunkable.com).
